COMMUNITY HEALTH NEEDS ASSESSMENT

FINAL SUMMARY REPORT

I. EXECUTIVE SUMMARY

The Tri-County Health Assessment Collaborative, consisting of hospitals, health systems, and health departments within Burlington, Camden, and Gloucester Counties came together to undertake a comprehensive regional community health needs assessment (CHNA). The Tri-County Collaborative included the following partners: Cooper University Health Care, Kennedy Health System, Lourdes Health System, Inspira Medical Center-Woodbury, Virtua Health, and the Health Departments of Burlington, Camden and Gloucester Counties. The CHNA was conducted from September 2012 to June 2013. The purpose of the assessment was to gather information about local health needs and health behaviors. The assessment examined a variety of indicators including risky health behaviors and chronic health conditions.

This CHNA Final Summary Report serves as a compilation of the overall findings of each research component. Detailed reports for each individual component were provided separately. The completion of the CHNA enabled Cooper University Health Care and its partners to take an in-depth look at the greater community. The assessment was conducted to comply with requirements set forth in the Affordable Care Act, as well as to further the hospital’s commitment to community health and population health management. The findings from the assessment were utilized by Cooper to prioritize public health issues and develop a community health implementation plan focused on meeting community needs.

Research Components

The CHNA Collaborative took a comprehensive approach to identifying the needs in the communities it serves. A variety of quantitative and qualitative research components were implemented as part of the CHNA. These components included the following:

- Secondary Statistical Data Profile of Camden County
- Household Telephone Survey with 575 community residents
- Key Informant Interviews with 113 community stakeholders
- Focus Group Discussions with 22 community residents

Key Community Health Issues

The following community health issues appeared in multiple research components:

- Access to Health Care
- Mental Health & Substance Abuse
- Chronic Health Conditions
II. COMMUNITY HEALTH NEEDS ASSESSMENT OVERVIEW

HOSPITAL & COMMUNITY PROFILE

Hospital Overview

Cooper University Health Care, the clinical campus of Cooper Medical School of Rowan University, is the leading provider of health services to Southern New Jersey. Cooper has been a vital institution in Camden for 125 years. In the past decade, Cooper has greatly expanded its facilities and services in Camden and throughout South Jersey. The Cooper network currently serves more than half a million patients a year.

Cooper’s main hospital campus is located on the Health Sciences Campus in Camden, New Jersey. Adjacent to the Cooper Plaza/Lanning Square neighborhood, Cooper has a long history of outreach and service efforts to its local community. Some of these initiatives include health and wellness programs for the neighborhood, development of three neighborhood parks and playground, and outreach to programs into local schools.

Cooper University Health Care has more than 700 physicians in more than 75 specialties. The health system had been the clinical campus of the University of Medicine and Dentistry of New Jersey – Robert Wood Johnson Medical School at Camden since 1978 and is now training the next generation of physicians at our new Cooper Medical School of Rowan University. Cooper offers training programs for medical students, residents, fellows, nurses and allied health professionals in a variety of specialties.

Cooper University Health Care offers a network of comprehensive services that include prevention and wellness, primary and specialty physician services, hospital care, ambulatory diagnostic and treatment services, and home health care within Southern New Jersey and the entire Delaware Valley.

Coupled with its educational goals, Cooper offers a broad agenda in the field of research. Cooper physicians are involved in ongoing research and development as they keep abreast of changing modalities of medical care. As an academic medical center, Cooper continuously attempts to improve patient’s quality of life through the research efforts of its medical staff.

Cooper University Health Care takes pride in its ability to offer a comprehensive array of diagnostic and treatment services. The hospital serves as Southern New Jersey’s major tertiary-care referral hospital for specialized services. These signature programs include: Level I Southern New Jersey Regional Trauma Center; the Cooper Cancer Institute, the Cooper Heart Institute, the Cooper Bone & Joint Institute, the Cooper Neurosciences Institute and Critical Care. Cooper is also home to The Children’s Regional Hospital, the only state-designated children’s hospital in South Jersey.
Community Overview

Cooper defined their current service area based on an analysis of the geographic area where individuals utilizing Cooper health services reside. Cooper’s primary service area is considered to be primarily located in Camden County, but includes a few ZIP codes in Gloucester and Burlington Counties that are geographically in close proximity to Cooper. Camden County is situated in the Southwestern part of New Jersey and encompasses a total population of approximately 514,000. The City of Camden sits on the edge of Camden County just across the Delaware River from Philadelphia. The city has significantly higher poverty rates, unemployment rates, and crime rates compared to the surrounding county.

METHODOLOGY

The CHNA was comprised of both quantitative and qualitative research components. A brief synopsis of the research components is included below with further details provided throughout the document:

- **Quantitative Data:**
  - A Secondary Statistical Data Profile depicting population and household statistics, education and economic measures, morbidity and mortality rates, incidence rates, and other health statistics for Camden County was compiled.
  - A Household Telephone Survey was conducted with 575 randomly-selected community residents. The survey was modeled after the Center for Disease Control and Prevention’s Behavioral Risk Factor Surveillance System (BRFSS) which assesses health status, health risk behaviors, preventive health practices, and health care access primarily related to chronic disease and injury. Households were surveyed from all ZIP codes within Cooper’s primary service area.
  - Data Collection Sessions were conducted at four locations in Camden City to ensure broad participation from diverse groups including members of medically underserved, low income and minority populations. 165 Camden City residents took an abbreviated version of the customized BRFSS household telephone survey tool. Responses were collected through wireless keypad technology.

- **Qualitative Data:**
  - Key Informant Interviews were conducted with key community leaders. In total, 113 people participated, representing a variety of sectors including public health and medical services, non-profit and social organizations, children and youth agencies, and the business community. These key informants represented the broad interests of the community served.
  - 2 Focus Groups were held with 22 community members in May 2013.
Research Partner
Cooper contracted with Holleran, an independent research and consulting firm located in Lancaster, Pennsylvania, to conduct research in support of the CHNA. Holleran has over 20 years of experience in conducting public health research and community health assessments. The firm provided the following assistance:

1) Analyzed and interpreted Secondary Data
2) Conducted, analyzed, and interpreted data from Household Telephone Survey
3) Conducted, analyzed and interpreted data from Key Informant Interviews
4) Conducted focus groups with community members

Community engagement and feedback were an integral part of the CHNA process. Cooper sought community input through focus groups with community members, Key Informant Interviews with community stakeholders and inclusion of community partners in the prioritization and implementation planning process. Public health and health care professionals shared knowledge and expertise about health issues, and leaders and representatives of non-profit and community-based organizations provided insight on the community served by Cooper including medically underserved, low income, and minority populations.

Following the completion of the CHNA research, Cooper prioritized community health issues and developed an implementation plan to address prioritized community needs.

III. SECONDARY DATA PROFILE OVERVIEW

BACKGROUND
One of the initial undertakings of the CHNA was a review of secondary data. Data that is obtained from existing resources is considered “secondary.” The data presented in this report comes from the “2012 County Health Profile” report prepared by Health Research and Educational Trust of New Jersey (HRET). This report was prepared for members of the New Jersey Hospital Association and provides county-level data for Camden County, New Jersey.

Note that Holleran was not involved in any of the data tabulation or gathering and simply served in an advisory role to interpret the key points of the secondary data profile. The county-level data is compared to New Jersey statewide averages.

The profile details data covering the following areas:

- Demographic & Household Statistics
- Access to Health Care
- Safety
- Health Behaviors
- Maternal & Infant Health
- Communicable Disease & Chronic Disease
- Mortality
KEY FINDINGS-SECONDARY DATA PROFILE

The following indicators are worse in Camden County compared to the state of New Jersey.

**Demographic & Household Indicators:**
- Higher percentage of total population with a disability
- Higher proportion of single-female households
- Higher percentage of children living in single-family households
- Fewer adults with Bachelor’s degrees, graduate degrees, or professional degrees
- Higher poverty rates and lower median household income
- Number of people in TANF, SNAP, EAP, and WIC increased from 2007-2011

**Access to Health Care**
- Higher percentage on Medicaid or public/government insurance
- Fewer number of general Internal Medicine physicians
- More emergency department visits
- More emergency department visits for primary care
- More hospital admissions (adults and elderly)
- More hospital admissions for ambulatory care sensitive conditions
- More Medicare 30-day readmissions
- More substance abuse treatment admissions

**Safety:**
- Lower percentage of children tested for lead poisoning
- More reports of child abuse
- Higher number of children under DYFS receiving in-home services
- Higher rates of domestic violence offenses
- Higher overall crime rate
- More juvenile and adult arrests (juveniles-runaways; adults-drug abuse violations)

**Health Behaviors:**
- More tobacco use (proportion of regular smokers and percentage who have ever smoked in a lifetime)
- Higher proportion of overweight/obese adults
- Fewer Females 50+ who have had a mammogram
- Fewer Adults 50+ who have had a blood stool test
- Fewer Medicare beneficiaries who have had a pneumonia vaccine
- Lower Percentage of Medicare beneficiaries who have had cancer screenings
- Lower Percentage of Medicare beneficiaries who have had diabetes screenings
Maternal & Infant Health:
- Higher teen pregnancy rates (ages 15-19)
- Higher percentage of births to unmarried mothers
- Higher rates of smoking and/or use of drugs during pregnancy
- Lower proportion of mothers receiving first trimester prenatal care
- Higher overall infant mortality rate

Communicable & Chronic Disease
- Higher percentage of adults reporting “fair” or “poor” health
- Higher incidence of sexually transmitted infections: Gonorrhea, Chlamydia
- Higher overall incidence rates for cancer
- Higher female breast cancer incidence rate among Whites and Blacks
- Higher overall lung cancer incidence rate
- Higher colorectal cancer incidence rate among males and Whites
- Higher oral cancer incidence rate among males

Mortality Rates
- Overall mortality rate
- More years per life lost (premature death)
- Higher Drug-related mortality rates
- Higher mortality rates due to heart disease, cancer, stroke, unintentional injuries, respiratory disease, diabetes, Alzheimer’s, kidney disease, and homicide
- Higher cancer mortality rates among Whites: all sites, prostate, lung
- Higher cancer mortality rates among males: all sites and lung cancer

FINAL THOUGHTS-SECONDARY DATA PROFILE

Based on a review of the secondary data, areas of opportunity are outlined below. Many of the unfavorable indicators included above fit into the following health issues categories:

Areas of Opportunity
- Access to Health Care
- Overweight/Obesity
- Substance Abuse
- Chronic Health Conditions (Diabetes, Cardiovascular Disease & Cancer)
- Maternal & Infant Health
- Crime/Domestic Violence
- Sexually Transmitted Infections
IV. HOUSEHOLD TELEPHONE SURVEY OVERVIEW

BACKGROUND

The partnership conducted a Household Telephone Survey based on the Behavioral Risk Factor Surveillance System (BRFSS). The BRFSS is a national initiative, headed by the Centers for Disease Control and Prevention (CDC) that assesses health status and risk factors among U.S. citizens.

The following section provides a summary of the Household Telephone Survey results including details regarding the research methodology as well as a summary of key findings. A full report of the Household Telephone Survey results is available in a separate document.

Methodology

Interviews were conducted by Holleran’s teleresearch center from October 2012 through February 2013. Trained interviewers contacted respondents via land-line telephone numbers generated from a random call list. Statistical considerations for the study can be found in Appendix B.

Participants

Interviews were conducted via telephone with 2,480 adults residing within specific ZIP codes in Burlington, Camden, and Gloucester Counties in New Jersey. A statistically valid sample of 575 respondents from the 42 ZIP codes in Cooper University Hospital’s service area was randomly selected from the total sample, allowing for comparisons across counties and hospitals.

Participants were randomly selected for participation based on a statistically valid sampling frame developed by Holleran. The sampling strategy was designed to represent the 108 ZIP codes served by the Tri-County Health Assessment Collaborative.

Only respondents who were at least 18 years of age and lived in a private residence were included in the study. It is important to note that the sample only includes households with land-line telephones which can present some sampling limitations.

Survey Tool

The survey was adapted from the Center for Disease Control and Prevention’s Behavioral Risk Factor Surveillance System (BRFSS). The BRFSS survey tool assesses health risk behaviors, preventive health practices, and health care access primarily related to chronic disease and injury. The customized survey tool consisted of approximately 100 factors selected from core sections and modules from the BRFSS tool. Depending upon respondents’ answers to questions regarding cardiovascular disease, smoking, diabetes, etc., interviews ranged from approximately 15 to 30 minutes in length.
Data Collection Sessions

In order to adjust for the limitations to conducting a land-line based telephone, an abbreviated version of the survey tool was also administered at in-person data collection sessions. Four data collection sessions were held in various locations in Camden City, NJ during March 2013. A total of 165 Camden City residents participated. The CHNA Collaborative worked with organizations serving underserved populations to recruit low-income and racially/ethnically diverse populations. Individuals attending the sessions could answer the questions anonymously through OptionFinder, wireless polling technology. Data collection session participants received a $50 CVS gift card for completing the survey.

KEY FINDINGS—TELEPHONE SURVEY OVERVIEW

The following section provides an overview of key findings from the Household Telephone Survey including highlights of important health indicators and health disparities. Areas of strength and opportunity are identified below by health topic. The findings are representative of the total service area of Cooper University Health Care.

Areas of Opportunity—Camden County

The following are areas where Camden County residents fare worse, or less healthy, than the State of New Jersey and/or the Nation as a whole.

Health Indicators

- **Healthy Days – Physical Health:** The proportion of residents who reported poor physical health for 15-30 days of the past 30 days (14.8%) is higher when compared to New Jersey (9.2%) and the United States (10.3%).
- **Healthy Days – Mental Health:** The proportion of residents who reported poor mental health for 15-30 days of the past 30 days (13.6%) is higher when compared to New Jersey (10.0%) and the United States (10.2%).
- **Healthy Days – Activity Limitation:** The proportion of residents who reported poor physical or mental health as being a barrier from usual activities for 15-30 days of the past 30 days (18.6%) is higher when compared to New Jersey (11.9%), but similar to the United States (13.3%).
- **Anxiety Disorder:** The proportion of residents who reported being told they have an anxiety disorder (18.1%) is higher when compared to the United States (13.3%).
- **Disability:** The proportion of residents who are limited in any activities due to physical, mental, or emotional problems (26.9%) is higher when compared to New Jersey (16.9%) and the United States (20.8%).
- **Exercise:** The proportion of residents who have not participated in physical activity outside of their regular job in the last month (32.2%) is higher when compared to the United States (24.4%) and New Jersey (26.6%).
Chronic Health Conditions

- **Heart Disease**: The proportion of residents who have been diagnosed with coronary heart disease (6.8%) is higher when compared to New Jersey (3.9%) and the United States (4.4%).
- **Asthma**: The proportion of residents who have been diagnosed with asthma (18.6%) is higher when compared to New Jersey (13.3%) and the United States (13.5%).
- **Diabetes**: The proportion of residents who have been diagnosed with Diabetes (12.9%) is higher when compared to New Jersey (9.2%) and the United States (9.3%).
- **Hypertension**: The proportion of residents who have ever been told they have high blood pressure (42.5%) is higher when compared to New Jersey (30.6%) and the United States (31.6%).

Immunization and Screening

- **Breast Exam**: The proportion of female residents who have had a breast exam within the past year (65.3%) is lower when compared to New Jersey (76.3%), but similar to the United States (68.4%).
- **Pap Test**: The proportion of female residents who have had a pap test within the past year (58.1%) is lower when compared to New Jersey (68.5%), but similar to the United States (57.7%).

Areas of Opportunity - Camden City

The following are areas where Camden City residents who participated in the Data Collection Sessions appear to fare worse, or less healthy, than Camden County, the State of New Jersey and/or the Nation as a whole. Please note that due to the sample size (n=165) and the difference in research methodology (in-person polling vs. telephone) these differences should be interpreted with caution.

- Less likely to have health care coverage
- More likely to report that in the past 12 months they needed to see a doctor but could not because of cost
- More likely to covered by Medicare, Medicaid, NJ FamilyCare
- More likely to report having trouble finding a general doctor/provider and specialist
- More likely to report having asthma
- More likely to report having diabetes or pre-diabetes
- More likely to report having disability (limited in any activities due to physical, mental, or emotional problems)
FINAL THOUGHTS-TELEPHONE SURVEY OVERVIEW

The Household Telephone Survey results provided important information about the current health status and health behaviors of residents in the Camden County. A review of the Household Telephone Survey results yields several areas of opportunity for the local community.

Areas of Opportunity
- Access to Health Care
- Mental Health
- Heart Disease & Hypertension
- Asthma
- Diabetes

V. KEY INFORMANT INTERVIEWS OVERVIEW

BACKGROUND
A survey was conducted among area “Key Informants.” Key informants were defined as community stakeholders with expert knowledge including public health and health care professionals, social service providers, non-profit leaders, business leaders, faith-based organizations, and other area authorities.

Holleran staff worked closely with Cooper to identify key informant participants and to develop the Key Informant Survey Tool. A copy of the questionnaire can be found in Appendix C. The questionnaire focused on gathering qualitative feedback regarding perceptions of community needs and strengths across 3 key domains:
- Key Health Issues
- Health Care Access
- Challenges & Solutions

The online survey garnered 113 completed surveys, collected during January and February 2013. It is important to note that the results reflect the perceptions of some community leaders, but may not necessarily represent all community representatives within Camden County. See Appendix D for a listing of key informant participants. The following section provides a summary of the Key Informant Interviews.
**KEY THEMES-KEY INFORMANT INTERVIEWS**

**Key Health Issues**

The first section of the survey focused on the key health issues facing the community. Individuals were asked to select the top five health issues that they perceived as being the most significant. The five issues that were most frequently selected were:

- Access to Health Care/Uninsured/Underinsured
- Diabetes
- Overweight/Obesity
- Substance Abuse/Alcohol Abuse
- Mental Health/Suicide

The following table shows the breakdown of the percent of respondents who selected each health issue. Issues are ranked from top to bottom based on the number of participants who selected the health issue as one of their top five issues. The first column depicts the total percentage of respondents that selected the health issue as one of their top five issues. Respondents were also asked of those health issues mentioned, which one issue is the most significant. The second column depicts the percentage of respondents that rated the issue as being the most significant of their top five.

<table>

</tbody>
</table>
An 'other' option was provided to allow respondents to select an issue that was not on the list. Other key health issues that were specified include:

- Asthma
- Homicides
- Influenza
- Lead based paint related issues
- Vision Problems
- Poverty/Hunger

Figure 1 shows the key informant rankings of all the key health issues. The bar depicts the total percentage of respondents that ranked the issue in their top five.

“What are the top 5 health issues you see in your community?”

![Figure 1: Ranking of key health issues](image-url)
Health Care Access

Availability of Services

The second set of questions concerned the ability of local residents to access health care services such as primary care providers, medical specialists, dentists, transportation, Medicaid providers, and bilingual providers. Respondents were provided with statements such as: “Residents in the area are able to access a primary care provider when needed.” They were then asked to rate their agreement with these statements on a scale of 1 (Strongly Disagree) through 5 (Strongly Agree). The results are displayed in Table 2.

“On a scale of 1 (Strongly Disagree) through 5 (Strongly Agree), please rate each of the following statements about Health Care Access.”

<table>
<thead>
<tr>
<th>Factor</th>
<th>Mean Response</th>
<th>Corresponding Scale Response</th>
</tr>
</thead>
<tbody>
<tr>
<td>Residents in the area are able to access a primary care provider when needed (Family Doctor, Pediatrician, General Practitioner)</td>
<td>2.73</td>
<td>Disagree</td>
</tr>
<tr>
<td>Residents in the area are able to access a medical specialist when needed (Cardiologist, Dermatologist, Neurologist, etc.)</td>
<td>2.42</td>
<td>Disagree</td>
</tr>
<tr>
<td>Residents in the area are able to access a dentist when needed.</td>
<td>2.32</td>
<td>Disagree</td>
</tr>
<tr>
<td>There is a sufficient number of providers accepting Medicaid and medical assistance in the area.</td>
<td>2.30</td>
<td>Disagree</td>
</tr>
<tr>
<td>There is a sufficient number of bilingual providers in the area.</td>
<td>2.32</td>
<td>Disagree</td>
</tr>
<tr>
<td>There is a sufficient number of mental/behavioral health providers in the area.</td>
<td>1.94</td>
<td>Strongly Disagree</td>
</tr>
<tr>
<td>Transportation for medical appointments is available to residents in the area when needed.</td>
<td>2.07</td>
<td>Disagree</td>
</tr>
</tbody>
</table>
Health care access appears to be a significant issue in the community. As illustrated in Table 2 and Figure 2, very few informants strongly agree to any of the health care access factors. Most respondents would either ‘Disagree’, or ‘Strongly Disagree’ with community residents’ ability to access care. Availability of mental/behavioral health providers garnered the lowest mean response (1.94) compared to the other factors.

**Barriers to Health Care Access**

After rating availability of health care services, the informants were asked about the most significant barriers that keep people in the community from accessing health care when they need it. The barriers that were most frequently selected were:

- Lack of Health Insurance Coverage
- Inability to Pay Out-of-Pocket Expenses (co-pays, prescriptions, etc.)
- Inability to Navigate Health Care System

Table 3 shows the breakdown of the number and percent of respondents who selected each barrier. Barriers are ranked from top to bottom based on the frequency of participants who selected the barrier. The third column in the table depicts the percentage of respondents that rated the barrier as being the most significant facing the community.
“What are the most significant barriers that keep people in the community from accessing health care when they need it?”

Figure 3: Ranking of barriers to health care access
Underserved Populations

Informants were then asked whether they thought there were specific populations who are not being adequately served by local health services. As seen in Figure 4, the majority of respondents (90%) indicated that there are underserved populations in the community.

“Are there specific populations in this community that you think are not being adequately served by local health services?”

Figure 4: Key informant opinions regarding underserved populations

Those respondents were asked to identify which populations they thought were underserved. The results can be found in Table 4 below. Uninsured/underinsured, low-income/poor, and homeless individuals were considered underserved populations. In addition, racial/ethnic minorities and immigrant/refugee populations were also considered underserved populations.

Health Care for Uninsured/Underinsured

Next, the informants were asked to select where they think most uninsured and underinsured individuals go when they are in need of medical care. Table 5 and Figure 5 show the results. The majority of respondents (79%) indicated that uninsured and underinsured individuals go to the Hospital Emergency Department for medical care.

In general, where do you think MOST uninsured and underinsured individuals living in the area go when they are in need of medical care?

Figure 5: Key informant opinions of where uninsured/underinsured individuals receive medical care
Resources Needed to Improve Access

Respondents were asked to identify key resources or services they felt would be needed to improve access to health care for residents in the community. Many respondents indicated that free and low cost medical and dental services are needed. In addition, informants want to see more mental health and substance abuse services. Transportation is also a concern. Table 6 includes a listing of the resources mentioned ranked in order of the number of mentions.

Challenges & Solutions

The final section of the survey focused on challenges to maintaining healthy lifestyles, perceptions of current health initiatives, and recommendations for improving the health of the community.

When asked what challenges people in the community face in trying to maintain healthy lifestyles like exercising and eating healthy, participants suggested the following common challenges:

- Cost/Access
- Motivation/Effort
- Time/Convenience
- Education/Knowledge
- Safety/Crime/Poverty
- Cultural Barriers
Respondents were asked “What is being done well in the community in terms of health and quality of life?” The following organizations and programs were mentioned as community assets:

- Project H.O.P.E.
- Federally Qualified Health Centers
- Cooper University Hospital
- Local Health Systems
- Faith-based Community
- Camden Coalition of Healthcare Providers
- Camden Churches Organized for People
- County Mobile Health Van
- Vision Screening Van
- NJ Partnership for Healthy Kids
- Food Access Committee
- County Department of Health
- UrbanPromise Ministries
- Camden Area Health Education Center
- Camcare
- Campbell’s Soup Healthy Communities Initiative
- Community Planning & Advocacy Center
- Camden City Garden Club, CSAs, Greensgrow Urban Farm

Overall, there were many positive comments about programs in the community; however, informants felt that there was still more work to be done. One respondent stated, “Not enough is being done - when one knows that there are several major health providers in the city of Camden.” Another responded, “I don’t think enough is being done to help people live healthy lives. The economy is a huge obstacle.”

Next, key informants were asked “What recommendations or suggestions do you have to improve health and quality of life in the community?” Several major themes emerged from the comments including the following:

- Increased Awareness/Education/Community Outreach
- Increased Collaboration/Coordination/Community Engagement
- Improved Access to Affordable Medical Care and Dental Care
- Improved Access to Affordable Exercise and Nutrition Programs
- Enhanced Mental Health and Substance Abuse Services

**FINAL THOUGHTS - KEY INFORMANT INTERVIEWS**

Many of the key informants expressed appreciation for the opportunity to share their thoughts and experiences and indicated interest and support for efforts to improve community health. Based on the feedback from the key informants, the following issues were identified as areas of opportunity for the local community.

**Areas of Opportunity**

- Access to Health Care/Uninsured/Underinsured
- Diabetes
- Overweight/Obesity
- Substance Abuse/Alcohol Abuse
- Mental Health/Suicide
VI. FOCUS GROUPS OVERVIEW

BACKGROUND

Two focus groups were held in Camden County in May 2013. Focus group topics addressed Access to Health Care & Key Health Issues and Nutrition/Physical Activity & Obesity. Each session lasted approximately two hours and was facilitated by trained staff from Holleran. Participants were recruited through local health and human service organizations and public news releases. In exchange for their participation, attendees were given a $50 gift card at the completion of the focus group. Discussion guides, developed in consultation with Cooper, were used to prompt discussion and guide the facilitation (See Appendix E).

In total, 22 people participated in the Focus Groups. It is important to note that the results reflect the perceptions of a limited number of community members and may not necessarily represent all community members in Camden County.

The following section provides a summary of the focus group discussions including key themes and select comments.

KEY THEMES-FOCUS GROUPS

Access to Health Care

Several participants indicated that they or someone they know have had difficulty obtaining health care services. Participants were asked about barriers to accessing health care services in the community. Participants indicated that lack of insurance coverage and inability to pay were major barriers to accessing health care services in the community.

Some individuals in the community are not offered health insurance through their jobs while others are unable to afford the health insurance that is offered. Participants explained that many people are failing through the gap as they don’t make enough to pay for insurance but are not poor enough to qualify for assistance.

Co-pays, deductibles, and prescription costs also present challenges in accessing health care. One participant explained that even though she is insured, her insurance company denied coverage for the tests that her doctor ordered.

Participants mentioned that there are not enough providers especially specialty providers and mental health providers. There are often waiting lists for appointments. Waiting lists for specialists can sometimes be several months. It can also be extremely difficult to find doctors who accept Medicare/Medical assistance.
Transportation is also a barrier in accessing health care. Participants talked about how the system is fragmented and not easily accessible throughout the county. In some cases, people forgo health care because of lack of transportation. The elderly are especially vulnerable.

There are some medical shuttle transportation services available, but participants stated that it is not always reliable. Rides must be scheduled in advance and passengers must be self-sufficient getting on and off the shuttle. Based on the route, it could take 1.5 hrs to travel what could be a 20 minute drive.

When asked where uninsured and underinsured individuals go for health care, participants indicated that uninsured residents often utilize the Emergency Department for primary health care because the Emergency Department will not turn them away if they do not have insurance.

Camcare, Kennedy Family Health-Stafford, and Project Hope-Camden-Bergen Landing were also mentioned as options for the uninsured, but they explained that many people are not aware that there are other options. Participants pointed out that there is a lack of understanding about using the ER and suggested that education and patient navigation services could assist patients in more appropriate use of the ER. Participants explained that Urgent Care Centers and Pharmacy Minute Clinics offer another option for care but out-of-pocket costs are still an issue.

**Key Health Issues**

When asked about major health issues facing the Camden County community, participants identified the following issues:

- Access to Health Care
- Mental & Behavioral Health/Substance Abuse
- Obesity/Overweight
- Diabetes
- Hypertension & Heart Disease

**Mental & Behavioral Health**

Mental and Behavioral Health/Substance Abuse issues were frequently mentioned by participants. The need for mental health counseling and addiction services was mentioned multiple times. Participants explained that there a major gaps in the system and that the area is lacking in psychiatric care especially for children and the elderly. Participants commented that some people are reluctant to seek care because there is still a stigma around mental health though they felt awareness and acceptance is steadily increasing.
Substance abuse is also a significant problem in Camden. Participants indicated that there is a growing problem with addiction and abuse of prescription drugs including pain medications. Participants talked about drug seeking behavior and patients going from one ER to another to try to get a prescription for painkillers. There are not enough detox facilities in the area so people either need to wait 3-6 months to receive treatment or they have to admit to suicide ideation to try to get admitted through the hospitals.

**Nutrition, Physical Activity, & Obesity/Overweight Issues**

Obesity/Overweight issues were discussed at length by participants. Attendees were especially concerned with childhood obesity. They felt that the food in schools is unhealthy and that physical activity is no longer structured. They felt that physical activity should be emphasized in the schools and expressed concern that schools are cutting back on time for gym and recess. There are some recreation programs in the county to keep children active, but there are not enough and they can be expensive.

When asked what challenges people in the community face in trying to stay physically fit and eat healthier, participants suggested the following common challenges:

- Cost
- Motivation/Effort
- Time/Convenience
- Education/Knowledge
- Stress/Depression
- Television/Video Games
- Crime/Safety

When asked what kinds of things were helpful to participants when they tried to be physically fit and eat healthier, the participants mentioned the following supports:

- Creating a plan and establishing goals
- Cooking simply
- Cutting out soda and junk food
- Trying to be a role model for children/family
- Having a buddy/mentor to help with motivation
- Group/team-based physical activity like walking clubs
- Working towards a goal or reward
Participants provided the following recommendations to encourage people in the community to eat healthier:

- More healthy restaurants and stores
- Affordable/Accessible healthy food
- Coupons/Vouchers for healthy food
- Healthy Cooking Demonstrations/Classes
- Healthy Recipes & Healthy Cooking Tips
- Family-oriented Workshops for children and parents to learn together
- Access to wellness coaches, nutritionists, dieticians
- Workplace & School wellness challenges.
- Educate children through exposure to farmers and fresh/local food

**Awareness of Health & Human Services**

Participants repeatedly stated that people in the community are not aware of the health care services and options that are available to them. One participant stated, “It’s amazing the resources that we have in this county, but people don’t know about them.” Participants felt that there was a lack of coordination of information and services in the community. Participants felt it would be helpful to have a county resource guide with lists of area resources. One participant mentioned that 2-1-1 is a toll-free information and referral hotline operated by United Way, but they stated that it can be difficult to keep so much information up-to-date.

When asked where people generally get health information, participants indicated that they get information from newspapers, magazines, flyers, brochures, and doctors’ offices. Hospitals, health departments, and community agencies were also mentioned as resources for information. In some cases, they learn about programs and services through word of mouth from friends, family, and neighbors.

When asked for suggestions for other ways to disseminate information, some participants suggested that information could be shared through television public service announcements and community access programming. Others suggested newsletters and postcards. They also suggested that the hospitals could partner with the school system to disseminate information to the parents.

Attendees pointed out that they have become increasingly reliant on the internet for information. In fact, many participants learned about the focus group through email blasts from community email lists. Community agencies and groups have developed networks to distribute information electronically.
Challenges & Solutions

Participants discussed the primary challenges and needs they see in the community related to health and quality of life. The following themes emerged from the discussion:

- Lack of affordable medical and dental services
- Need for mental and behavioral health services
- Transportation barriers
- Lack of community awareness of available programs and resources
- Need for centralized place to get information and listing of available resources
- Lack of coordination among programs and providers
- Need for health education and wellness programs

When asked what could be done to improve health and quality of life in the community, participants emphasized the need to improve communication and awareness about existing services. Overall, participants saw the need for more community outreach and health education. In addition, participants suggested the following to improve community health:

- Health Fairs
- Health Workshops
- Health Screenings
- Nutrition & Exercise Programs
- Chronic Disease Management Programs
- Transportation Assistance
- Patient Navigation Services
- Wellness Coaches
- Eldercare/Home Care Services
- Prescription Assistance Programs

FINAL THOUGHTS-FOCUS GROUPS

The focus group participants were grateful for the opportunity to share their thoughts and experiences, and at the end of the sessions, many expressed support for community-wide efforts to improve health in Camden County. Based on the feedback from the focus group participants, the following health issues appear to be potential areas of opportunity for the local community.

Areas of Opportunity

- Access to Health Care
- Mental & Behavioral Health/Substance Abuse
- Obesity/Overweight
- Diabetes
- Hypertension & Heart Disease
VII. OVERALL ASSESSMENT FINDINGS & CONCLUSIONS

Community Health Issues

The Community Health Needs Assessment research components reveal a number of overlapping health issues for residents living in Camden County. The following list outlines the key issues that were identified in multiple research components.

Access to Health Care

Access to Health Care is a national health issue that can make it difficult to address other community health problems. Poverty rates in Camden County are worse than the state of New Jersey with more than 11,000 families living below the poverty level. While most residents in Camden County have health insurance, a higher percentage of individuals have public health insurance. There are more than 76,000 individuals in Camden County who receive Medicaid. A review of secondary data also showed elevated Emergency Department visits and Emergency Department visits for primary care conditions as well as higher hospital admission and readmission rates in Camden County.

Secondary data and Household Telephone Survey results also revealed that Camden County residents are more likely to have a disability that limits their activities compared to the state and the nation which can impact access. Preventative screening rates are lower in Camden County compared to the state which can also be indicative of access issues.

Among Camden City residents who participated in the data collection sessions, nearly one-quarter did not have health insurance coverage and approximately 38% indicated that they could not see a doctor due to cost. The telephone survey results also exposed health disparities among certain racial/ethnic groups. For example, Hispanic and African American respondents were more likely than White respondents to report being unable to see a doctor due to cost in the past year. Hispanic respondents were also less likely to have health insurance coverage.

Key Informants ranked Access to Health Care as the most pressing health issue facing the community, and they indicated that the top three barriers to care were lack of health insurance coverage, inability to pay out-of-pocket expenses, and the inability to navigate the health care system. In addition, 90% of Key Informants felt that there are underserved populations in Camden County. Focus Group participants also discussed Access to Health Care and barriers to seeking care at length. They shared concerns about affording health care, navigating the health care system, lack of providers, and lack of transportation.
**Chronic Health Conditions**

Chronic diseases such as diabetes, cardiovascular disease, and cancer are significant health concerns in Camden County. Overall cancer incidence and mortality rates are higher in Camden County compared to New Jersey. In addition, incidence rates for breast cancer and lung cancer are higher than state rates. Mortality rates for diabetes, heart disease, stroke, and chronic respiratory disease mortality rates are also higher in Camden County compared to New Jersey.

The Household Telephone Survey revealed that Camden residents were more likely to be diagnosed with Diabetes, Asthma, Heart Disease and high blood pressure/hypertension compared to the state and the nation. In addition, certain risk factors for chronic diseases are worse in Camden County when compared to New Jersey and the United States. Overall adult obesity rates are higher in Camden County than New Jersey. Tobacco use is higher in Camden County compared to the state with more than 17% of adults classified as every-day smokers.

Key informants and focus group participants also identified these issues when asked about the major health issues facing the community. Diabetes was ranked by Key Informants as the second most significant health issue facing the community. Heart disease, stroke, and cancer were frequently mentioned as well. Focus groups participants suggested a need for health education, preventative screenings, and chronic disease management programs.

**Mental Health & Substance Abuse**

According to secondary data sources, substance abuse and mental health problems are significant issues in Camden County. Substance abuse admission rates, drug abuse violation rates, and drug-related mortality rates are higher within Camden County compared to New Jersey overall. The percentage of mothers who use drugs during pregnancy is higher than statewide percentages. Child abuse/neglect, domestic violence, overall crime rates are also higher in Camden County compared to the state. The Household Telephone Survey revealed that a higher proportion of Camden residents are limited by mental or emotional problems compared to the state. Camden County residents were also more likely to report poor mental health and to have an anxiety disorder compared to the state and nation.

Key Informants ranked Substance Abuse/Alcohol Abuse as the fourth most significant health issue facing the community, and Mental Health/Suicide was ranked as fifth most significant health issue facing the community. Informants suggested that availability of mental and behavioral health providers was very limited. Focus Group participants shared that Mental Health/Substance Abuse were growing problems in Camden County and emphasized the need for education, prevention, treatment, and support services. They also frequently mentioned the need for more mental and behavioral health providers especially for Medicaid/Medicare patients and low-income families.
SELECTION OF COMMUNITY HEALTH PRIORITIES

Cooper appointed a team of Cooper leaders from its Urban Health Institute, Population Health Institute, Cooper Cancer Institute, community health department, and hospital administration to review the results of the Community Health Needs Assessment. This team met numerous times to discuss and prioritize key findings from the community health needs assessment and then to create an implementation strategy to address the health needs. A list of participants is included in Appendix A.

Following an overview of the research, results and prioritization process, the team considered criteria to evaluate and prioritize the needs, and other aspects of health improvement planning, such as goal setting and developing strategies and measures to address the needs. The group discussed the research findings along with the inter-relationship of identified health needs and special populations within the community. Social determinants of health, including education, poverty, access to care, and social norms were considered to better understand the issues, as well as current public health initiatives.

In addition, on August 13, 2013, representatives from healthcare organizations, health departments, and community agencies met with a similar goal to review and evaluate the results of the research and prioritize the health needs identified.

As a result of the work of the Cooper internal team and the meeting of the Collaborative group, Cooper adopted the following health priorities and goal statement for each priority area:

- **Access to Health Care**
  *Goal: Improve access to comprehensive, quality health services.*

- **Chronic Health Conditions**
  *Goal: Prevent and manage chronic disease through education, screening, nutrition and physical activity.*

- **Mental Health & Substance Abuse**
  *Goal: Increase awareness and coordination of services to improve access to mental health and substance abuse services.*

APPENDIX B: HOUSEHOLD TELEPHONE STUDY
STATISTICAL CONSIDERATIONS

The Household Telephone Study sampling strategy was designed to represent the service area of Cooper University Healthcare. For the purposes of this study, the following ZIP codes within Camden County were used to define the hospital service area:

<table>
<thead>
<tr>
<th>ZIP Code</th>
<th>ZIP Code</th>
<th>ZIP Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>08002</td>
<td>08045</td>
<td>08084</td>
</tr>
<tr>
<td>08003</td>
<td>08046</td>
<td>08086</td>
</tr>
<tr>
<td>08007</td>
<td>08049</td>
<td>08091</td>
</tr>
<tr>
<td>08010</td>
<td>08052</td>
<td>08093</td>
</tr>
<tr>
<td>08012</td>
<td>08053</td>
<td>08096</td>
</tr>
<tr>
<td>08021</td>
<td>08054</td>
<td>08102</td>
</tr>
<tr>
<td>08026</td>
<td>08057</td>
<td>08103</td>
</tr>
<tr>
<td>08029</td>
<td>08059</td>
<td>08104</td>
</tr>
<tr>
<td>08030</td>
<td>08065</td>
<td>08105</td>
</tr>
<tr>
<td>08031</td>
<td>08066</td>
<td>08106</td>
</tr>
<tr>
<td>08033</td>
<td>08075</td>
<td>08107</td>
</tr>
<tr>
<td>08034</td>
<td>08077</td>
<td>08108</td>
</tr>
<tr>
<td>08035</td>
<td>08078</td>
<td>08109</td>
</tr>
<tr>
<td>08043</td>
<td>08083</td>
<td>08110</td>
</tr>
</tbody>
</table>

The sampling strategy identified the number of completed surveys needed within each ZIP code based on the population statistics from the U.S. Census Bureau in order to accurately represent the service area. Call lists of household land-line telephone numbers were created based on the sampling strategy. The final sample (575) yields an overall error rate of +/-4.1% at a 95% confidence level. This means that if one were to survey all residents of the selected service area within Camden County, the final results of that analysis would be within +/-3.9% of what is displayed in the current data set.
Data collected from the 575 respondents was aggregated and analyzed by Holleran using IBM SPSS Statistics. The detailed survey report includes the frequency of responses for each survey question. In addition, BRFSS results for New Jersey and the United States are included when available to indicate how the health status of Cooper’s service area compares on a state and national level.

Statistically significant differences between service area responses and state and/or national responses are also noted in the detailed report. In addition, statistically significant differences for select demographic characteristics (gender, race/ethnicity) are included in the report. Holleran runs Z-tests and Chi Square tests in SPSS to identify statistically significant differences and uses p values $<.01$ as the cutoff for significance.

It is common practice in survey research to statistically weight data sets to adjust for demographic imbalances. For example, in the current household survey, the number of females interviewed is above the actual proportion of females in the area (Sample: 67.8% female vs. Actual Population: 52.0% female). The data was statistically weighted to correct for this over-representation of females. The data set was weighted by age, gender, and race in order to more accurately represent the population. It should be noted that the national dataset (from the CDC) is also statistically weighted to account for similar imbalances.
APPENDIX C: KEY INFORMANT STUDY QUESTIONNAIRE

INTRODUCTION: In order to better understand the health of the communities they serve, Cooper, Kennedy, Lourdes, Inspira, and Virtua Health Systems along with local county health departments are partnering to conduct a comprehensive Community Health Needs Assessment. The Tri-County Health Assessment Collaborative will evaluate community health needs in Burlington, Camden, and Gloucester Counties.

You have been identified as an individual with valuable knowledge and opinions regarding community health needs, and we appreciate your willingness to participate in this survey.

The survey should take about 10-15 minutes to complete. Please be assured that all of your responses will go directly to our research consultant, Holleran Consulting, and will be kept strictly confidential. Please note that while your responses, including specific quotations, may be included in a report of this study, your identity will not be directly associated with any quotations.

When answering the survey questions, please consider the community and area of interest to be the county /counties you select below. Please select which county/counties you primarily serve or are most familiar with:

- Burlington County
- Camden County
- Gloucester County

KEY HEALTH ISSUES

1. What are the top 5 health issues you see in your community? (CHOOSE 5)

<table>
<thead>
<tr>
<th>Access to Care/Uninsured</th>

</table>

5. What are the most significant barriers that keep people in the community from accessing health care when they need it? (Select all that apply)

- Availability of Providers/Appointments
- Basic Needs Not Met (Food/Shelter)
- Inability to Navigate Health Care System
- Inability to Pay Out-of-Pocket Expenses (Co-pays, Prescriptions, etc.)
- Lack of Child Care
- Lack of Health Insurance Coverage
- Lack of Transportation
- Lack of Trust
- Language/Cultural Barriers
- Time Limitations (Long Wait Times, Limited Office Hours, Time off Work)
- None/No Barriers
- Other (specify):
6. Of those barriers mentioned, which **one** is the most significant? (CHOOSE 1)

- [ ] Availability of Providers/Appointments
- [ ] Basic Needs Not Met (Food/Shelter)
- [ ] Inability to Navigate Health Care System
- [ ] Inability to Pay Out-of-Pocket Expenses (Co-pays, Prescriptions, etc.)
- [ ] Lack of Child Care
- [ ] Lack of Health Insurance Coverage
- [ ] Lack of Transportation
- [ ] Lack of Trust
- [ ] Language/Cultural Barriers
- [ ] Time Limitations (Long Wait Times, Limited Office Hours, Time off Work)
- [ ] None/No Barriers
- [ ] Other (specify):

7. Please share any additional information regarding barriers to health care in the box below:

8. Are there specific populations in this community that you think are not being adequately served by local health services?

   _ Yes _ No

9. **If yes**, which populations are underserved? (Select all that apply)

- [ ] Uninsured/Underinsured
- [ ] Low-income/Poor
- [ ] Hispanic/Latino
- [ ] Black/African-American
- [ ] Immigrant/Refugee
- [ ] Disabled
- [ ] Children/Youth
- [ ] Young Adults
- [ ] Seniors/Aging/Elderly
- [ ] Homeless
- [ ] None
- [ ] Other (specify):
10. In general, where do you think MOST uninsured and underinsured individuals living in the area go when they are in need of medical care? (CHOOSE 1)

- Doctor’s Office
- Health Clinic/FQHC
- Hospital Emergency Department
- Walk-in/Urgent Care Center
- Don’t Know
- Other (specify):

11. Please share any additional information regarding Uninsured/Underinsured Individuals & Underserved Populations in the box below:

12. Related to health and quality of life, what resources or services do you think are missing in the community? (Select all that apply)

- Free/Low Cost Medical Care
- Free/Low Cost Dental Care
- Primary Care Providers
- Medical Specialists
- Mental Health Services
- Substance Abuse Services
- Bilingual Services
- Transportation
- Prescription Assistance
- Health Education/Information/Outreach
- Health Screenings
- None
- Other (specify):

**CHALLENGES & SOLUTIONS**

13. What challenges do people in the community face in trying to maintain healthy lifestyles like exercising and eating healthy and/or trying to manage chronic conditions like diabetes or heart disease?

14. In your opinion, what is being done well in the community in terms of health and quality of life? (Community Assets/Strengths/Successes)

15. What recommendations or suggestions do you have to improve health and quality of life in the community?
CLOSING

Please answer the following demographic questions.

16. **Name & Contact Information:** (Note: Your name and organization is required to track survey participation. Your identify WILL NOT be associated with your responses.)

Name:
Title:
Organization:
Email Address:

17. Which one of these categories would you say **BEST** represents your community affiliation? (CHOOSE 1)

- [ ] Health Care/Public Health Organization
- [ ] Mental/Behavioral Health Organization
- [ ] Non-Profit/Social Services/Aging Services
- [ ] Faith-Based/Cultural Organization
- [ ] Education/Youth Services
- [ ] Government/Housing/Transportation Sector
- [ ] Business Sector
- [ ] Community Member
- [ ] Other (specify):

18. What is your gender?  
   - [ ] Male  
   - [ ] Female

19. Which one of these groups would you say **BEST** represents your race/ethnicity? (CHOOSE 1)

- [ ] White/Caucasian
- [ ] Black/African American
- [ ] Hispanic/Latino
- [ ] Asian/Pacific Islander
- [ ] Other (specify):

20. The Tri-County Health Assessment Collaborative (Cooper, Kennedy, Lourdes, Inspira, Virtua Health Systems and Burlington, Camden, and Gloucester County Health Departments) and its partners will be using the information gathered through these surveys to develop a community health implementation plan. Please share any other feedback you may have for them below:

Thank you! That concludes the survey.

APPENDIX E: FOCUS GROUP DISCUSSION GUIDES

Access to Health Care & Health Issues Discussion Guide

Access to Care

I’m going to begin the discussion with getting your feedback on health care as it relates to your ability to access health care.

1. Did you or someone you know have difficulty obtaining health care services in the past few years? If yes, what are the reasons?
   
   Probes: What are the most significant barriers that keep people in the community from accessing health care? Insurance coverage, copays, availability of providers, transportation, cost, language/ cultural barriers, accessibility, and awareness of services. What about access to other health services like dental care and vision care?

2. Where do you usually get health care when you need it? Why?
   
   Probes: Do you get regular checkups or do you see a doctor only when you are sick or need treatment? In general, where do uninsured and underinsured individuals go when they need health care?

3. If you had one suggestion on how to improve access to care for uninsured or underinsured individuals in the community, what would that be?

Health Issues

4. Focusing on specific health issues, what would you say are the biggest health problems in the community?
   
   Probes: Examples: Obesity, Heart Disease, Diabetes, Mental Health, Substance Abuse, Dental Health, etc. Why? Are there other factors in the community that contribute to these problems?

5. In your opinion, are overweight and obesity issues a problem in Camden County? Why?
   
   Probe: What challenges do you think people face in trying to stay physically fit and eating healthier?
6. In your opinion, are mental health and behavioral health issues a problem in (COUNTY) County? Why?

*Probes: What challenges do you think people face in trying to access mental and behavioral health services and treatment programs? (e.g. transportation, wait lists, cost, insurance coverage, program eligibility, stigma, language/cultural issues) What suggestions do you have to ensure that people have access to quality mental and behavioral health services?*

**Health Education/Communication**

Next, I want to talk to you about how you gain information about health and health services in the community.

7. Do you feel that people in the community are fully aware of the healthcare services/options that are available to them? Why? Why not?

8. How do you usually get health information or find out about resources in the community such as health workshops or support groups? What is the best way to promote these types of programs?

*Probes: Health provider, clinic, pharmacist, health educator, nurse, nutritionist, churches, family members, magazine/newspaper, TV, radio, internet/social media, etc. Posters/flyers, brochures/booklets, newspaper articles, church newsletters/programs Who do you trust most to give you health information? Why?*

9. Would you be interested in opportunities or programs to help improve your health and your family’s health?

*Probes: What types of programs or opportunities? What would make you more likely to participate?*

**Closing**

10. If you had one suggestion on what could be done to improve the health of the community, what would it be?

11. Is there anything we haven’t covered in the discussion that you think is important?
Nutrition, Physical Activity, & Obesity Discussion Guide

Overweight/Obesity

Today, we’re going to discuss a number of things related to health, including healthy eating and exercise. Nationally, obesity and overweight issues have been increasing among adults and children.

1. What do the words overweight and obesity mean to you?
2. In your opinion, are overweight and obesity a problem in Camden County? Why?
3. What does health or being healthy mean to you? Is weight related to health? How?

Physical Activity

We know lack of exercise or physical activity can contribute to weight issues. The next few questions are about physical activity.

4. Would you describe yourself as active? Why or why not?
5. What helps people to be “physically active?” What are the challenges?
6. In general, do you think that children and adults in your community are getting a significant amount of physical activity? Why? Why not?

(Recommended is at least 60 minutes per day for children and 30 minutes per day for adults.)

7. Do you feel there are opportunities in your community for children and adults to be active?

Probes: Are there parks and playgrounds? Are there barriers/challenges for adults and children to engage in physical activities? What can be done to address these barriers/challenges?

8. Overall, what suggestions do you have to ensure that children and adults in our community are physically active?
Nutrition/Healthy Eating

Eating habits can also contribute to weight gain. We are going to move to a discussion of nutrition and healthy eating.

9. Do you think you eat healthy and have healthy eating habits? Why or why not?

Probes: Are you eating a variety of fruits and vegetables, whole grain foods, low fat dairy and lean proteins?

10. What helps people “eat healthy” and what makes it challenging?

Probes: Access to food, cost, time, knowledge

11. Are you interested in learning more about how to choose and prepare healthy foods?

Probe: What is the best way to educate adults and children about eating healthy?

Health Education/Communication

12. Would you be interested in opportunities or programs to help improve your health and your family’s health?

Probes: What types of programs or opportunities? What would make you more likely to participate?

13. Where do you currently get health information? Do you view websites for health related information? Which ones? (Are they credible?)

Probes: Health provider, clinic, pharmacist, health educator, nurse, nutritionist, churches, family members, magazine/newspaper, TV, radio, etc.

14. In what format would you like to receive future health information?

Probes: Brochures, booklets, flyers, newspaper articles, church newsletters/programs, videos, radio programs, television programs, social media (i.e. –Facebook, Twitter, phone apps.), etc.

Closing

15. If you had one suggestion on what would help Camden County residents to eat healthy and move more, what would it be?
